General Comment

[Page 1] This comment is authored by Evan Nicholas Mallery. This document is approved for public dissemination. The document contains no business-proprietary or confidential information. Document contents may be reused by the government in developing the AI Action Plan and associated documents without attribution.

Unregulated theft of intellectual property is a death sentence for the American economy and a blatant violation of an individual's fundamental right to property. Intellectual property created by an individual or a corporation is the backbone of a competitive and fair market, and I firmly believe that allowing AI models to be developed on proprietary copyrighted material will irreversibly destroy American culture and freedoms. The "unnecessarily burdensome requirements" that this executive order are MY rights - MY freedoms, that I hold dear to me as a musician and artist. I do not consent for my intellectual property to be stolen to train an AI model to replace me. If the AI sector cannot innovate without the theft of intellectual property, then it should not exist. Allowing AI companies to break the law and use intellectual property that was not explicitly created for them, or otherwise legally or contractually given the rights to, will destroy the fundamental pillar of capitalism that is the right to a fair and competitive market. It is unfair for an AI company to be able to use copyrighted material to develop its models while simultaneously also punishing individuals for pirating or otherwise illegally consuming copyrighted material. AI steals from my livelihood as an American, and profits off of theft and plagiarism. AI companies should be required to pay for the intellectual property that they use, the same way that individuals and other corporations are required to pay for or otherwise negotiate contracts to access intellectual property. Existing AI projects have successfully negotiated licensing deals for access to copyrighted materials, such as Adobe's suite of stock photo imagery. Allowing AI companies unregulated access to copyrighted material would also represent the largest drain of American intellectualism into a single resource in American history - all without any compensation to the actual hardworking Americans that worked to generate the intellectual property in the first place.
