General Comment

I do not believe AI holds a place in the future of the US as AI profits off of theft. Copyright is a protection that protects those that create works as a hobby, small business, all the way up to large cooperation. AI takes opportunity away from Americans

AI also damages the livelihood of many Americans - slowly removing creative jobs from the workforce and damaging small businesses. An artist can not make their living and contribute to culture and society when they are so freely being stolen from by developers that do not have their best interest in mind.

On top of the protection copyright provides, it also brings into question the safety and ethics of these programs. If AI developers can not properly source content that is legal for them to use, how are we as Americans suppose to trust that it will filter in relevant and helpful information. This can create concerns for national security - the government already seems to think that there is a concern that outside sources feed false information to Americans, I can very much see AI such as ChatGPT and Google AI search results feeding into that misinformation machine that can harm us as a society.

AI in its current form is not helpful to the American people. If it is not helpful with guardrails in place, we the people can not trust it without those protections and more.
