General Comment

Artificial Intelligence (AI) as a program has been pushed forward by large companies like Google but even to this day has yet to produce a practical product. In many cases, the AI interferes with the casual use of say a search engine. In recent memory, AI companies have stated that they are aware of any legal problems with their programs taking from existing works but have made no conscious effort to fix this problem.

Giving AI corporations a form of immunity from copyright laws will not improve the product and might even open up other countries with their own AI program such as China an open reign to take from American companies.

The simpleminded goal of getting a machine to produce a product for less money isn't worth tearing down the foundation that makes it possible to profit from said product.
