Docket: NSF_FRDOC_0001
Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479
Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-3480
Comment on FR Doc # 2025-02305

Submitter Information

Name: Gustavo Garcia
Email: [REDACTED]

General Comment

I will be blunt: the internet on the whole will be eradicated if AI isn't properly regulated. If it requires data to build its model, any and all sources of that data should be adequately compensated or otherwise be off the table. So far, any and all generative forms of AI and LLM's have been to the detriment of society and emboldened all numbers of scammers, grifters, criminals and Large Companies to swindle common citizens out of their time, money and more. It has stolen hundreds of thousands of jobs from humans all for the sake of CEO's to save themselves more money and deprive all other people of quality services. In the past ten years, the United States has been in nothing but a sharp decline due to these businesses skimping and swindling people and doing sloppier and sloppier quality control. LLM's will cause larger businesses to turn criminal as well, find more and more excuses to take more and more jobs to the point of completely eliminating the human element that drew customers their way in the first place.

Alas, I'm digressing. Generative AI/LLM should be made illegal, or otherwise subject to the same Copyright Laws as other media forms, set as an Opt-In model where those who volunteer must be compensated heavily up-front and for every hundred Generations after its release, and otherwise subject to the heaviest mandates possible due to the severity of danger it has impinged upon society.
