General Comment

The "Development of an Artificial Intelligence Action Plan" must not go through, as the current state of "AI" is nothing more than deception, theft, and an environmental and humanitarian disaster.

"AI" has been deceptively marketed as being similar to, or is an Artificial General Intelligence. Which is far from the case, as current models are do not "think", they utilize tokens, a weighted value to generate imagery, text, and now video. Zero "thought" or "reasoning" is used in this process, nor is any truly novel technology being used.

Artificial Intelligence (AI) as it stands, is nothing more than a marketing term for weighted Markov Chains fed with massive amounts of data, using inordinate amounts of power for results that are often incorrect, outright disinformation, or manipulated to achieve the creator's goals. AI, which often refers to Large Language Models are an extrapolation of previous machine learning algorithms with the operational idea behind them being that "more data is better" when it comes to accuracy and flexibility, which is not the case.

Current "AI" schemes are fed data in ways that violates all known national and international copyright laws. Crawling websites, literature, imagery, and software and collecting and copying all the data within without permission of the users or creators. Often, this involves violation of "robots.txt", a file which says to crawlers that the site is not to be indexed. In order to prepare the data to make it useful for the model, unpaid or minimally paid workers in the US and abroad to achieve this goal cheaply. And the end result is the wholesale copying of unlicensed works utilizing borderline slave labor.

Each "AI" processor utilizes 1200 watts of power, in data farms that have dozens of thousands of them per facility. Utilizing inordinate amount of power to generate middling, incorrect results that most LLM's and other "AI" even admit to. And to cool all of this, 20 gallons of groundwater are used per minute in evaporative cooling systems. Even if said data farm is in the drought-stricken southwest US.

And all of this mass data gathering is carte blanche for a setup for a surveillance state. Instead of having a human in the middle, it liberates malicious actors within the government and corporations from having to deal with manpower needed behind national and local surveillance. Without the accuracy or second guessing of a human operator.

Needless to say, "AI" should not be confused with machine learning algorithms that are found in the sciences that are tailored for that a specific analysis and have existed decades before "AI" and LLMs. Said ML algorithms are far more efficient and accurate, able to perform analysis in a short time span on standard desktop hardware. Without specialized AI chips or equipment.

The reasoning behind the Development of an Artificial Intelligence action plan is not driven by the development to build a thinking machine, but utilizing marketing to surreptitiously crush creativity, freedom, worker's rights, and environmental progress.
