General Comment

Generative AI is nothing short of disastrous to the economy, the environment, and the continued educational and cultural growth of humanity as a whole. Generative AI has proven to be costly with no real return on investment, and because of the way it has been touted as the next great technological advancement, every industry has flocked to it to replace their seasoned employees to have the work done at a lower cost, quality notwithstanding. The server farms require an incredible amount of energy that puts a strain on our already strained environment. It is using up our natural resources at an astounding rate to power these servers with no real benefit. Meanwhile, teachers everywhere are complaining that their students don't know how to look up information or write a report because they use AI to do everything for them, and AI only gives accurate responses about 60% of the time. AI is a copyright disaster in all artistic fields, as it is trained on individual artists' works with no credit or remuneration. AI should be heavily legislated against and restricted, as the continued use of Generative AI is disastrous to our way of life as a species.
