General Comment

Generative AI (or LLMs) have been illegally trained on copyright materials, but don't take my word for it, but rather a former OpenAI employee - https://suchir.net/fair_use.html. We are already seeing the impact of generative AI tools on creatives' income as well as creatives decision to not share material as they previously had to protect their income AND future income from being stolen from generative AI tools/models. Support of this plan is an act against the role of free markets and those markets' decisions of what should or should not be successful. Looking for a brighter future for Americans requires less generative AI tools and support of said tools. These tools/models actively degrade Americans' critical thinking skills and those skills are needed for America to be a global leader (<https://www.mdpi.com/2075-4698/15/1/6>). Or in other words, dim America's future. Furthermore, these tools are in the hands of a few companies without any regulations and there is absolutely no protection for anyone from these tools (from the slopification of information that they consume to their rights to Name-Image-Likeness used/remaining in the models). Promotion of generative AI is a promotion of increase scammers, deepfakes, and confusion/distrust of all Americans, particularly the elderly and the vulnerable. This plan is anti-American - it will put the power in the hands of a few, be harmful to many, and there has yet to be any money/revenue made by generative AI tools while they grind up the work and income of others, the environment, and stress the US energy grid (<https://e360.yale.edu/features/artificial-intelligence-climate-energy-emissions>). This plan should not be supported in any manner. I strongly oppose this plan due to the continuously harm that generative AI tools will cause Americans and our country as a whole.
