General Comment

I believe the strength and value of AI technologies has been grossly misrepresented in the common media and marketplace reporting that will have a dire "bubble" effect as stakeholders realize the limited value of this technology in mass applications for the daily lives of the average American. Quite frankly I don't believe this technology holds a place in the future of the US if the dominant philosophy is to replace, undercut, or undervalue the labor and livelihood of our working class and intellectual and creative laborers. The technology can only keep growing right now by stealing from my livelihood as an artist and quite simply cannot create anything useful without further scraping and robbery-scraping ad infinitum. I join countless other Americans in proclaiming: AI is overhyped and is fleecing the eyes of the American public.
