General Comment

1. As Deepseek demonstrated, anything US AI companies can do, China can do cheaper. This means any data that US AI companies scrape will also be scraped by Chinese AI companies. Chinese companies will then win the pricing race to the bottom.

We need to be investing in ways to protect IP and copyright (like the Nightshade project), so the US can maintain its edge in innovation and creativity.

2. Classifying AI training as fair use is a massive government handout to big companies who can afford to pay for their own data. It will decimate US design industries and stifle US creativity.
