General Comment

As a concerned citizen of the United States, it is of great worry that the state of our economy and the materials behind it I make comment. This plan to remove regulation of Artificial Intelligence tools and systems is dangerous to our economy and the state of private citizens ability to control their own material. As all citizens have a right to their own lives and property as part of the Constitution our country is founded upon, it is critical we protect our citizens and the private economic forms they can create. Forms of Artificial Intelligence have hampered these rights and attack our free speech, through both misinformation and direct harm upon citizens.

A lack of regulation was the same cause that caused the Dot Com bubble, the 2008 market collapse, NFTs, and the continued failure of cryptocurrency. Do not strip these companies of regulations, as they do not hold citizens of America to their aid, for there is nothing preventing these companies from making a profit of off confidential and dangerous information and selling it to hostile foreign powers.

Unregulated AI is a thief to the American people, a threat to security, and an individual's private government information should not be available to for-profit individuals and companies.

Unregulated AI will set a precedent to stop protecting over 340 million Americans from enemies within and without. By removing regulation of Artificial Intelligence, the federal government will fail in its duty to maintain its tenets of protection as outlined by our Constitution.
