General Comment

I vehemently oppose allowing artificial intelligence companies free reign to any and all sources of information to feed their algorithms. The very fact that the companies feel they can merrily pillage from hard-working artists, authors, and other creatives is a slap in the face, not to mention a direct violation of copyright laws.

The creation of the arts is a painstaking effort, allowing the human hand, eye, and soul to craft something unique and beautiful. It may take hours. It may take days. Ultimately, it is the effort that makes it worthwhile.

What these companies wish to do is to take the hard work others put in, and completely invalidate them for something that could have been regurgitated from a malfunctioning blender. To have the gall to call this product "art" and then claim to not have to follow existing laws to do so is laughable. Why should talentless hacks have the legal right to run over another person's creation via the use of mere keywords, when that same artist has no such protections or support system? How is that a fair and just America, knowing one is restricted by the law and the other is unburdened by it?

Deny this claim to AI companies posthaste. Their intent is to utterly destroy free expression in the name of soulless consumerism. This is not how you make America great.
