As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-vid6-bocn
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001
Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479
Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-3588
Comment on FR Doc # 2025-02305

Submitter Information

Name: Judy Schmidt

General Comment

We should not want to be "dominant" in the field of AI. As it stands, AI is not at all intelligent. It uses a massive amount of electricity and computing resources to steal data that it has been fed, often without permission and against copyright law, which it then spits out as a "best guess" and any of that data that it has been fed can itself be wrong or made wrong by the software. It may look okay at first, but even minimal inspection turns up all sorts of oddities and outright wrongness.

I encountered an "AI" customer service "agent" on a website the other day, and it said that it understood how I felt and that's simply a lie. It can't understand emotions. It can't empathize. I have no idea if what it told me was right. I filled out the form at the end letting the company know that I hated it, and wished it was any real person, even someone hired offshore.

Personally, as an artist, I also find it abhorrent and unethical that some want to use AI to replace humans for creating art, especially when it stole all our art to make its algorithm in the first place. There can be no novelty and no soul in anything an AI outputs. It's a blender that can only output what it's already seen before.

The only thing we should dominate about AI is regulating it and making sure it is only used for the few things that it is both actually a useful tool for using processes that were ethical. The last thing we need is to be slaves to machines that just barely function and need constant corrective attention, even more than simply having a human do it in the first place.
