## General Comment

Allowing AI companies to access and use legally copyrighted works to improve their own products and increase their own financial gain, while giving nothing in return, will be hugely damaging to all artists and to copyright laws as we know them. Many people who create original works do so to earn a living, to feed their families and to fuel our society. Without art created by humans, we are nothing - just machines.

By allowing companies and individuals to reap the benefits of peoples' originals works without proper licensing or financial compensation is wrong, cruel and frankly insane. I see no logical reason why this should be allowed.

If AI companies want to train their models on peoples' works they need to get permission, just like law and common sense clearly states.
