General Comment

AI programs just take the hard work people do and repackage it for someone else's benefit. Who will make art, or write articles, or create videos or film or anything if it all gets thrown into a computer and spin around until it's some generic digital slop. This threatens millions of people in this country who make work that depends on having exclusive rights over their work whether it's made available to the public for free or not. If a hard working writer makes articles and relies on ads from the host website it would ruin their business for Google or anyone else to take the article and make a bot that essentially plagerizes it and sends it to people under the guise that it created something by itself. No one would read books or watch movies if an AI program can recreate it for pennies.
