General Comment

AI can only create from existing sources to work. It is thus plagiarizing and stealing work from people. If we critique and make students upload their own essays and other projects to test for plagiarizing, how is AI any different? This is setting up a future for Americans where rules like copyright/trademark laws are only protected for big corporations and will eventually take away more jobs from humans in preference to a cheap gimmick. Without human creation and input, AI can't work and shouldn't unless the companies pay the artists and other people they use to teach their programming. If you have any moral understanding and care more about those you govern, you would actually listen, rather than letting lobbyists pay you for your votes.
