General Comment

Any plan for AI usage by the Federal Government must include a detailed outline of how the government plans to incorporate FAIR and CARE principles. These standards and best practices must be incorporated symmetrically. By symmetrically I mean that it is not sufficient to require data and language producers to incorporate open science and open data practices into the work that feeds AI programs; the outputs of LLMs, machine learning, and other artificial intelligence must also give credit and openly cite their sources. This gives users the ability to trace the sources of AI outputs and it gives credit to data producers.

Also, no AI programs should make decisions about people, including employment, healthcare, benefits, or law enforcement. These actions require human input and empathy to ensure that no Americans are harmed by non-human decision makers.
