## General Comment

The development of Artificial Intelligence is a relatively newer field that needs ethical guidelines that protect the American people. AI has already infringed on the intellectual property of thousands of American creatives by training off their work with no compensation. This not only affects real hardworking people who wish to contribute art, writing, and more to society, but the inability of AI to use real thought in its output has resulted in a flood ing of false information and imagery. Regulations are needed to protect copyright laws and more broadly the American Dream to work hard and earn from your own intellectual property and skills. No entity should be above the law just to further their business. Thank you for your consideration.
