General Comment

I do not believe AI holds a place in the future of the US. OpenAI cannot provide America with any useful service that its own people cannot currently provide. It steals from artists, novel writers, photographers, playwrights, screenwriters, graphic designers, and every other American creative under the sun and directly profits off the theft of their work. Copyright infringement laws were written into being FOR A REASON and exist to protect the work belonging to companies and individuals along with their ability to profit and make money from their own work without worrying about someone stealing it and using it under their own name. AI is grossly overhyped and CANNOT PERFORM THE SERVICE ADVERTISED. AI does not do research or paint pictures or answer questions. It is a string of code programmed to comb the Internet and simply generate something it thinks fulfills the criteria without bothering to check its sources or ask for permission. You can ask AI for a banana bread recipe and it will return you what it thinks is a banana bread recipe, but will be a recipe for a loaf of bread shaped like a banana, or worse, something that isn't a recipe at all. The idea that OpenAI and other generative AI companies require a pass to circumvent copyright infringement, a policy that this country takes very seriously, is a huge joke and should be extremely telling that AI is a waste of time and nothing more than a common thief.
