General Comment

Generative AI should not hold a place in the future of the US. It steals from the livelihood of millions of citizens in order to function and attempts to profit off the theft. It only holds any power through pulling wool over the eyes of Americans; it is not akin to the upgrade from carriages to cars or radio to TV, and it does not do anything new. By fundamental definition generative AI -cannot- do anything new, as it doesn't actually learn from the data it steals, it simply tries its best to guess at what's desired of it from its databanks.

In addition, GenAI is not profitable. It's been heard from the mouths of those who develop it that it costs more to allow people to use it than any sort of money being made. Despite this, generative AI is an openly admitted bid to take over jobs in the entertainment industry. OpenAI is not the future; it is a dying corpse gasping for air and hoping to be elevated back up by the government, and one that would tank a very lucrative industry if enabled. Once people get tired of the samey, stale slop that generative AI produces, they will look to other countries, and the economy will drop harshly. Do not allow this to happen.

GenAI is not something that we want defining the future of our country; it would be a terrible look to say that a tool that has -depended- on using content without permission is important to our future, and to allow these run-at-a-loss technologies to piggy back off of government funding to continue to fight a losing battle.
