General Comment

Generative Ai represents a threat to all creatives and creativity itself, in that it only statistically regurgitates past work, from a massive derivative work that is the ai model itself, forcing creative professionals to compete against their own work. This includes both work from the past and each new work they make that is used to train new models. This de-incentivizes innovation and growth in creative fields by real creative human beings, resulting in the brain drain of an entire field of human endeavor. What is left will be a machine presumed to be “creative” that does not think as we do, whose referential gaze is permanently directed to an ever more distant past. Our only reasonable option is to expand intellectual property law to encompass this new technology and media, and bring it under similar constraints that reigned in peer to peer file sharing in the early 2000’s.
