

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-vpp7-ff4i
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-3643

Comment on FR Doc # 2025-02305

Submitter Information

Name: Rebecca Wells

Email: [REDACTED]

General Comment

Generative AI companies have already admitted to stealing from my livelihood as an author and an American. They intend to profit off of that theft without compensation.

The United States's greatness comes from individual and collective achievement working toward the greater good. It does not come from the theft of individuals' hard work and intellectual property. Do not give OpenAI or other generative AI companies the power to steal from others without compensation.

Forcing generative AI into the workforce has resulted in worse products and worse results, including in my line of work, which ends up costing companies money. It is the equivalent of sabotage to my field and I have been forced to change software to remove it from my workflow.

Generative AI is a completely speculative market that has yet to turn a profit despite many hundreds of billions of dollars and years of development. Its powers are extremely limited, and it can't even do what it claims to do. Studies have found that generative AI interfaces like ChatGPT return incorrect answers about 60% of the time. Microsoft's own studies find that the use of generative AI leads to poorer critical thinking and worse outcomes for employees that use it. The use of generative AI does not make this country great - in fact, it actively makes it worse but dumbing down our greatest resource, our citizens and workers.

There is a way to develop generative AI ethically, legally, and safely. This is not it.
