Docket: NSF_FRDOC_0001
Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479
Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-3653
Comment on FR Doc # 2025-02305

Submitter Information

Name: Ann Fowler

[REDACTED]

General Comment

While I can understand artificial intelligence's value in the advancement of medicine, I believe that generative AI-- the kind that rampantly steals from copyrighted material in order to regurgitate soulless pieces of so-called "art"-- is a blight on humanity. It's resource intensive and seeks to consolidate wealth into the hands of the few at the expense of the many. Illustrators, writers, movie makers, voice actors, and more are all being told that their skills aren't worth being paid for. But at the same time, legislation like this empowers thieves to reproduce their hard work without input, without credit, payment, or respect. It's a lie used to justify exploitation.

If generative artificial intelligence can't exist without theft, then it doesn't have a place in this world. The demand for this technology is overinflated by the snake oil salesman desperate to line their pockets.

Generative AI is a bubble that is doomed to burst. Don't give into the grift. This kind of decision can only lead to a surge of unemployment and needless suffering while opening the gates to a flood of garbage.

One of the US's greatest exports is our entertainment industry. If generative AI is allowed to train on copyrighted material, then there will be nothing stopping the industry from being driven straight into the garbage with cheap junk. People will learn the difference when they are tired with junk. They will look elsewhere. This isn't an investment in America's future; it's a death sentence.
