General Comment

The use of "AI" is an incredibly misleading term, coming from a Silicon Valley so afraid losing relevance that it has conflated "Artificial Intelligence" with "Learned Language Model." Allowing these morons to have their way will create more problems than it could ever possibly hope to solve, as their desperation to get on the second coming of the "Dot Com Boom" has created such monstrous failures as crypto currencies, non-fungible tokens, and various other grifts. Before we even get to alleged benefits of these LLMs they pretend are AI as depicted in science fiction, this technology is grossly inefficient in both power consumption and general use. It cannot produce new things, it cannot become self-aware and make decisions, it is a glorified parrot that squawks whatever some Silicon Valley "techbro" decides is revolutionary. These "techbros" have abused sentiments from 80s and 90s business executives to make a mockery of film and art industries, and should not ever be allowed to have any kind of legal defense in their disgusting overestimating of their own worth. These techbros have produced nothing that is valuable to the average American, and have only devalued the industries they stick their grubby fingers. Because of this, it is imperative that no legislative official in the United States does anything but ridicule proponents of AI and dismiss any bills they propose.
