Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-3667

Comment on FR Doc # 2025-02305

Submitter Information

Name: Donald Purkey

Email: [REDACTED]

General Comment

The United States of America's AI action plan should revolve around protecting United States citizens from the destruction that unfettered AI can havoc. Ideally, legislation would be drafted and approved to limit AI datasets used for training, limit the output of AI programs, and appropriately fund ethical uses of AI for the public good. The ideal scenarios include using AI to detect life threatening diseases, such as cancer, earlier and with more accuracy, and using AI to process large amounts of data more effectively than humans can. The US government both shouldn't be concerned with using and be actively limiting AI that commits potential copyright infringement from training its models on products of human creation, such as art pieces, YouTube videos, and scripts from television/movies. AI that aims to create media for consumption that is normally made by humans is an even more effective waste of time than the pieces of media themselves. Rather, the US government should concern themselves with legislation and enforcement of legislation that protects citizens jobs from AI copyright infringement and keeps humans creating media that is meant to console and touch other humans.
