General Comment

Not only has this technology not proved to be a reliable source of information, the foundation of it is entirely powered off of bad-faith stolen writing and artwork. Ultimately, this plan would nationally devalue the human practice of communication. As an arts advocate, practitioner, publisher, and enterprise technology professional, I find myself consistently dumbfounded by the deep disconnect exhibited the technocratic silicon valley investor class and the rest of humanity.

Sorry there isn't another hyperscaler left, we shouldn't have to sacrifice fundamental aspects of what makes people people as well as an insane breach of data privacy to prop up an over-bloated, aimless, and wasteful technology that has no viable product. This isn't Weekend At Bernie's.
