General Comment

AI is a great way to ruin the lives and careers of the living, breathing writers, musicians, and artists around the world. If that's what AI does, f&^% it - burn it off the planet. It's one thing to have AI learn and process data to help solve problems or mathematical equations. It's completely another thing to use "generative AI" to generate music, books, art, etc. from stolen, un-authorized sources.

There's not one professional company out there that is peddling AI that isn't a large scale criminal organization who steals what they find on the internet without any qualms about it.

If we're going to waste our time and resources on this, then these damn companies MUST be forced to respect ALL copyright laws and license the data they use. If people complain that other countries won't do the same thing, then sanction their asses, tariff them, hell, bomb them for all I care - but don't destroy the creative abilities of humans for the cheap, capitalistic assholes who don't want to suffer the same responsibilities as the rest of us.

AI wants to learn and grow, then they need to pay up.

If you give them the ability to side-step ANY aspect of copyright, we're completely f&^%d and you will have just ruined more lives and jobs than you will ever create or see grow.
