As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-vxc2-ttlh
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001
Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479
Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-3711
Comment on FR Doc # 2025-02305

Submitter Information

Name: Lindsay Townes

[REDACTED]

General Comment

Large language model and other artificial intelligence developers have no a priori right to anyone else's data, especially without prior permission and uncompensated. If a business model requires large-scale data theft on order to function, then it is a bad business that deserves to fail.

AI businesses are bad businesses that deserve to fail - they lose money hand over fist, fail to meet promised benchmarks and kick the can down the road indefinitely. They have already consumed hundreds of billions of dollars, most of which is voluntarily spent yet I can't help but think what research and improvements the human well-being could have occurred with those funds. They do not have any right to any data that is not voluntarily given and certainly not without compensation.

An author did not write a novel to help AI billionaires make more money. An artist didn't draw a picture to train the machine that puts them out of work. It is an anti-human technology, burning billions in capital, to further enrich the already spectacularly wealthy.

It is to be regulated and monitored, not loosed to feed on whatever it can find.
