General Comment

The generative technology should be BANNED, not further developed, the levels of abuse and harm to people's likelihoods, the environment, and to the law it does are beyond astronomical, it's already making extortions and scams even worse than ever before, and the usage of this tech at any capacity is only atrophying people's basic ability of problem solving, decision making, and only encouraging an even more selfish, greedy, and apathetic attitude among those who engage with it, which is especially harmful to younger ages and future generations, everything this generative tech does is BAD, and anyone pushing it and scrapping data to fuel it should be treated as a criminal, especially because it's also being used for very harmful stuff like the fabrication of pornography, including child pornography, which the tech has TONS of inside its database, and needs to operate and deliver results the average consumer may consider remotely decent

Copyright laws are there for a reason, and enabling companies to take copyrighted works for genAI is like allowing robbers to break locks and get into people's houses, let alone that also will create a monstrous floodgate that will oversaturate and collapse markets far and wide, it's already doing it in some fields, like I said, everything this tech does is BAD, tech companies pushing this request should get PUNISHED and charged for all the harm this tech's already doing to everything and everyone
