

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-vz3j-7yo8
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-3726

Comment on FR Doc # 2025-02305

Submitter Information

Email: [REDACTED]

Organization: Studio Sunshower

General Comment

AI by design operates on a black box, meaning that not even its engineers fully understands the way in which it trains itself on data. That in itself creates a situation that demands that these companies are held responsible for their actions in utilizing a technology that has already destabilized industries in places like China's illustration sector.

The so-called "innovations" which AI is capable of are best served in medical research, solving complex calculations that actually improve human quality of life. However, AI is already being leveraged by companies to steal — yes, steal — copyrighted art and content for training models which then allow these same companies to lay off workers in a field that is already volatile and brutal to work in.

To not hold AI companies accountable is to directly harm artists. Directly harming artists means harming the media industry, and harming the media industry harms AI. Because what happens when these data models run out of human-authored content to train on because none remains?

I have dedicated my life to art across several mediums. Take it from an expert — highly regulated AI is only an issue for bad actors who would destroy jobs, not create them. Real innovation is born from the labor of human hands, not a mindless algorithm posited as bona fide intelligence.
