General Comment

America was built on innovation, but this was not just technological innovation. People travel from all over the world to visit Disney World, because it's a powerful American cultural icon. That icon was built by people, smart and creative artists and engineers.

That American cultural legacy has also been protected by robust legal frameworks and international agreements that ensure the American people that developed these cultural and technological achievements can enjoy the fruits of their labor.

A computer server is not creative. It's creations are not the products of hard-working American's building this nation into something greater. It's scanning their works and copying it.

AI has proven itself time and again to be deeply flawed, unreliable, and untrustworthy. This technology is deeply unprofitable and AI is not the future of the United States. We are nation built on capitalism, and the market has spoken when it comes to AI.

I also fail to see any legitimate national security concerns that would justify this. An AI used for tracking terrorists has no need for stealing books, art, or movies. As a citizen I find it deeply disturbing that soldiers and federal agents would need AIs trained on fictional works of art to protect our country.

AI is not the future of the United State, and AI algorithms employed in the defense of our nation have no need to be trained on legally protected intellectual properties or copyrighted works.
