General Comment

The highest priorities in any plan of action involving AI must include the protections for the rights of the public, not limited to copyright and reproduction. No other industry is allowed wholesale use of public creations without their owners' consent and/or compensation, and AI development must not be any different in this regard. Several industries have already raised significant legal challenges to the creation and use of AI models trained on copyrighted data, and such avenues must remain available in any plan development.

In addition, the plan must include requirements of efficiency and energy consumption. LLMs and other AI systems have an exceptionally high energy usage in both training and everyday use. If left unchecked, this will serve to strain our energy resources as models and their usage grow. The trade war that the administration has instigated against our closest trading partners has already had negative effects for our energy supply - allowing these systems to add more for little gain would be pointless and wasteful in a time where we cannot afford either.
