General Comment

AI generated content is not something that should be protected at all, much less endorsed and enabled by the government. It is built on theft and an utter disregard for any kind of ethics. Private commercial AI projects have all yet to show that they are even capable of turning a profit, even with the fact that the content they feed into their AI models is all stolen and unpaid for. The government should not subsidize, protect, or encourage private sector AI development in its current iteration.
