General Comment

Please DO ensure that unnecessarily burdensome requirements are put into place for AI. We NEED to hamper private sector AI innovation in order to protect art and artists. The current lack of regulation has significant ethical and safety implications for AI. We need to ban the most problematic uses of AI, such as AI that distorts human behavior or manipulates people. AI also poses high risk to public safety & human rights, such as AI used in critical infrastructure, credit checks, criminal justice, and even Internet search engine results which give entirely incorrect and even dangerous responses. AI has serious ethical issues, like privacy breaches, bias, and decision-making that cannot be challenged since no actual person is involved. Also, large-scale AI training processes consume vast amounts of water and energy and create enormous environmental concerns and problems. Finally, and perhaps worst of all, the whole concept of AI relies on theft. Theft is illegal! Why would our country want to encourage anything illegal! AI art relies on, and is created by, scraping copyrighted material from the Internet for content. The original artists & creators receive zero compensation for this. If large companies are able to use the plagiarism machine known as AI, they will choose not to employ humans to do artistic work any longer, putting so many people out of work. It is stealing art and it is stealing artists' jobs. THEFT IS ILLEGAL! Instead of developing plans and regulations in support of AI, the government needs to strengthen copyright protections for artists and apply those protections to prevent AI from carrying out such harmful theft on such a massive scale. Say no to AI!!!!
