General Comment

Machine learning, which falsely brands itself as artificial intelligence when it is no such thing, is an active threat not only to the livelihoods of creatives across the country but also to the information Americans rely on every day.

A data set forever devouring itself will eventually only churn out garbage and that is already incredibly evident in how simple internet searches have become fraught with information that is misleading at best and actively harmful at worst.

Machine learning has its place. That place is doing things like identifying cancer cells, not 'writing' books it wholesale stole or creating art with chopped up pieces it had no right to.

Do not let silicone valley shill you into being their fall guy for yet another attempt at reinventing the wheel for profit. It didn't work with bitcoin, it didn't work with NFTs, it will not work with AI.
