General Comment

AI has its place and has shown to be effective in areas like medicine and science where large data sets are gathered and are distributed for the public good.

The same cannot be said for large language models and image generation which take data from copy written work in order to poorly mimic human creativity. These AI do not show a public good and seek only to inflate the pocket books of those who have invested so much money into the technology falling into a sunk cost fallacy. These models has not shown to have meaningful contributions to justify the cost of operation. The restrictions are needed to protect creative works and copywriter.
