General Comment

AI Companies should not be able to have their AI function by stealing copyrightable materials. On a basic level, If AI companies were to steal from copyrightable materials without consequence, then they would be able to profit off of someone else's legal work. On a more complicated level, this only serves to devalue art and information. It devalues art by making something "good enough" for individuals, companies or teams to use instead of the work of any hard-working artist that took the time to hone their craft. The same goes for information, as getting information from any search site like Google Chrome or Microsoft Edge will force their AI answers first, leading to potentially incorrect information. Worse than all of that, however, is the increasingly disastrous consequence of endangering national security as a result of using copyrightable materials for the improvement of their programs. AI as of now, has been used to deepfake videos, content, and information about various people and historical events and improving the functionality of these programs will only make it worse in the long run by making it easier to make slanderous, defamatory and endangering art of people like the President himself, making realistic depictions of things that he didn't do, or videos of things he never did or lies that he never told and all of that will, ironically, make the "fake news" that Trump has rallied against for almost a decade.
