General Comment

To whom it may concern,

Generative AI is an existential and economic threat to many different industries and will utterly devastate hundreds of thousands of jobs. Allowing OpenAI and other AI companies to scrape copyrighted work will NOT "promote human flourishing, economic competitiveness, and national security" as this Presidential Executive Order suggests, but will merely undermine America's cultural dominance on a global scale and set back decades of creative output. As proven by China's DeepSeek from late-2024, an AI model DOES NOT NEED endless data to advance it; OpenAI wants copyrighted data because it is built on a zero-sum business and technical plan. If this order were to go through and copyrighted works are fed into OpenAI's proverbial wood chipper, what's left?

I would like to remind those who are reading my comment that OpenAI is financially unsustainable and expected to lose \$44 billion until it is projected to be profitable in 2029, based on its own shaky data. Trusting them with America's greatest cultural outputs will be wasted on them, but make no mistake, it would be wasted on ALL AI companies.
