General Comment

The "unnecessarily burdensome requirements" described in this document are the very guardrails that prevent rampant profiteering off of our culture and individuality. While it would be remiss to say that there is no practical application for AI, it is necessary to maintain and further implement measures to ensure that the very resources being harvested to develop the technology aren't destroyed in the process. Especially in the perspective of generative AI, there are dangers present that are being passed off as parody and/or original works while the people suffer. Generative AI voices are already being used in scams today to the point in which the elderly are starting to need passphrases with their loved ones for phone calls. Internationally, people are being tricked into consuming stolen and regurgitated works. The talent and individuality of people are being put into question because AI has harvested and propagated imitations of what is essentially their identity throughout the world.

Today we laugh at the comical and grotesque fake images of political figures and celebrities. Scoff at the blatantly AI voice and animation of people singing to culturally adored songs. Stare in disbelief at the answer to a question that we know is 100% wrong. Tomorrow this will be forged scandals of political figures and celebrities. Fabricated evidence released to the masses causing weeks of damage before being confirmed false. Revised history and knowledge that future generations will trust because it has always been present in their lives.

The RFI states "...with the right government policies, the United States can solidify its position as the leader in AI and secure a brighter future for all Americans." The knowledge, culture, and individuality of Americans, not to mention that of the rest of the world, is the very fuel that turns the gears of this machine. Do not burn the present to pave the way for a future on a ball of cinders. Especially at this time, the only ones benefiting from the propagation of AI are those who have the money and network to market these technologies while the ones who create the knowledge fed to it disappear from the world. If you cannot stop it from hurting people it claims to benefit please at the very least protect these "unnecessarily burdensome requirements."
