## General Comment

I do not believe AI has any place using copyrighted work to train on. It's grossly overblown technology that is at best just auto-complete with a fee. AI has already polluted search engines, from incorrect representations of living beings and locations, to outright lies and smear campaigns that are annoying to discern from fact. Based on precedent, The current methods of obtaining data is immoral at best and illegal at worst.

It's a sign of being cheap, willing to steal but unwilling to pay people for their work. The more people are aware of its use, the more that will turn away from engaging with those that use it.
