General Comment

Generative AI has no long-term value to the United States and allowing AI developers to have carte blanche to use copyrighted works nullifies the purpose of copyright to begin with. There will be no value in copyrighting anything when someone can simply instruct an AI to make a perfect copy of something if this technology is unregulated. Multi-billion creative dollar industries that are the core of our economy would be irrevocably damaged both nationally and internationally, as American creative works are enjoyed around the world.

Generative AI being harder to create because of Copyright is, in effect, Copyright working as intended. If there is truly something useful to be gained by developing these generative AI it can be done without infringing on the creative works of The United States of America.
