General Comment

Generative AI is a serious threat to the creative community because it essentially steals the work of artists, writers, and musicians. These AI models are trained on a massive amount of existing content, much of which belongs to human creators who have put in years of hard work and dedication, undermining the very essence of creativity and originality.

It's frustrating to see AI generate text or art that closely resembles the work of real creators, all while sidestepping the labor and inspiration that goes into making truly unique pieces and real information... like for this very comment...

...yes AI wrote the above which can clog your input so yeah, people who work for the government like you reading this would likely don't want that. Create regulation hard against AI or it'll be the age of misinformation.
