General Comment

The idea that a demonstrably proven waste of money, time and energy would be worth any kind of special treatment is absurd. OpenAI and their ilk are a shell, operating on speculative value, borrowed time and, frankly, the ignorance and gullibility of people who don't know better. I seem to remember a time not so long ago when the federal government was moving heaven and earth to stop people from violating copyright law on the internet, but it seems now that a cadre of insufferable fools have conned the tech industry into sinking billions into yet another bubble like NFTs and crypto before it, suddenly copyright doesn't mean anything at all. Curious, that.

The arts in the US are already undervalued and trod upon enough--the last thing it needs is another boot on its already sole-imprinted neck. The notion that this technology has anything of merit to contribute to culture, the economy or national security would sound like an early april fools joke if it weren't clear that many upon the wheels of power are either greedy or dumb enough to believe this is what the country needs.

We could be housing the homeless and tackling climate change, and instead we're stuck fretting over Silicon Valley stocks. Just another day in the good ol US of A.
