General Comment

It is very clear that this is an attempt to make it so that all AI based companies don't ever have to be held accountable for the massive amount of damage that AI is doing to the livelihoods of peoples in many different industries across the world.

The idea that "AI" is just doing another version of what humans do is blatantly ignoring the fact that AI has to be programmed AND trained. The programmers are responsible for the stealing that they do. Data being accessible does not make it "publicly available for use" for everyone able to see it. AI companies should not be given a route to bypass that just because what they make is AI.

Copyright laws just being guardrails and regulations keeping AI from achieving its potential is a laughable idea at best. None of these AI companies have ever been profitable and at no point have they served our country as a public good. This executive order is blatantly ignoring the fact that these companies have already been acting like copyright laws don't exist, and it's very clear the only purpose of such an order is so they can keep acting in such a manner.

The bottom line is that this technology was wholly developed to steal from Americans like me, and it has only gotten this far because of the speculative tech industry.
