General Comment

Generative Programs such as AI do not have any future in the field of art in the United States. It steals jobs from American artists, profits off of the theft of their property, and should never replace human-made works that have heart and soul put into them.

Artificial intelligence has its place in innovation and society, such as its use in the field of medicine and health as a way of creating highly optimized and effective surgeries a human could never conceive, but my American Government should not allow OpenAI to legally plagiarize the works of humankind.
