As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-wgag-me0j
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-3888

Comment on FR Doc # 2025-02305

Submitter Information

Name: Rachel Heffley

General Comment

"AI" as it exists in the form of Language Learning Models (LLM) and image generation is not good for the American people. It is being pushed by a handful of corporations who believe, in their greed, that AI will make it so they will never have to pay writers, artists, or experts of any kind ever again. They fully believe they can take intellectual property, churn it through their machines, and we will buy it back from them with a smile, despite the fact that overwhelmingly, AI-generated texts and images have been ill-received by the majority of Americans at best, and are alarmingly misleading or outright harmful at worst.

They wish to harm the American people thrice: first, by stealing existing works with no permission and no compensation, and laying off the very people who produced that work to replace them with machines. Second, by having these machines working 24/7, producing ad-nauseam like a million monkeys on typewriters, guzzling water and polluting our electrical infrastructure, we would be faced with water restrictions and rolling blackouts just to maintain them. Last, they insult the American public and the world at large by thinking the slop produced by churning up their stolen material would be 'good enough' that we would be willing to pay for it - PAY for things that THEY could not be bothered to pay for in the first place.

Technology should serve humanity, not the other way around. I would challenge the proponents of mass adoption of "AI" to answer what good it does humanity. Why should we want this? How does it help us?

The fact that many companies are already backing off on AI after it has become clear that, in its current form, it has no use that cannot be done faster, better, and cleaner by something else, is telling. It is a gimmick, at best, and not one that should cost people their jobs or rights. We should not be looking to bend our entire concept of intellectual property, let alone our electrical infrastructure, to prop up an industry already in collapse.

No one wants AI except the people selling it.
