Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-3905

Comment on FR Doc # 2025-02305

Submitter Information

Name: Jeff Bohannon

General Comment

"Artificial Intelligence" is, as it currently exists, is an algorithm that decides what follows something based on what it was trained on. What it was trained on is almost universally something that was chosen without the creator's choice and intent. It is impossible to create something like this of any reasonable size without blatant theft and copyright infringement.

Even if you ignore the massive energy and resource requirements, the fact that it rarely makes anything of any actual value, and that it is an industry run by scammers, just the fact that it's a theft engine is enough to make this an obvious sign that this needs to be dropped immediately.

Pretty much every industry that was scammed into buying the bridge on this is walking back on it because it's simply not worth the energy or money. I'm begging you to catch up. It's a f&^0% scam, get a grip.
