As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-whkk-xks7
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-3910

Comment on FR Doc # 2025-02305

Submitter Information

Name: Sarah Newman

Email: [REDACTED]

General Comment

NO NO NO

Generative AI is theft of other people's goods.

Either AI companies must pay fair prices for the goods they analyze and add to their databases -- these goods containing work by living artists, scientists, writers, and analysts -- or they must be banned from using all copyrighted content.

AI as it is going now, is wasteful, and produces slop.

You already spent billions on it, only to be completely outdone by Deepseek, a little AI from China that consumes far less power and potable water while turning out results every bit as "useful" as those produced by the big AI companies in the US.

IF you insists on going forward with this, there must be strict laws about what can and cannot be used for AI training without payment, and AI output MUST NOT be allowed to be copyrighted. Furthermore, AI must not be used as a pretense for firing human employees, when the end results always seem to involve either those few people left spending overtime having to clean up the AI output that was supposed to replace their former co-workers, or an end-product that is error-ridden SLOP.

You want to end waste and fraud? GENERATIVE AI IS A PERFECT PLACE TO FOCUS.
