General Comment

The GenAI industry thinks they can coerce us into allowing rampant theft without so much as a "by your leave" to creators, much less adequate compensation despite their claims their product can't exist without the art & writing of others. The truth is their only leverage is the threat to take their ball and go home. While there is real potential for other forms of AI the only kind dependent on such theft is the one that has no mechanisms to prevent it from spreading misinformation and propaganda, the type of AI most easily tricked into reproducing its training data. If it can't exist without stealing from others then it doesn't get to exist.
