As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-wjby-xepk
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-3926

Comment on FR Doc # 2025-02305

Submitter Information

Name: Andrew Heinze

[REDACTED]

General Comment

I am an artist in the online creative 2d space, and have been a digital artist both as a livelihood and as a hobbyist for over ten years. To sum up my feelings on this policy would be this: Generative AI does not and should not have an unregulated future in the United States.

Generative AI is both unethical, and damaging to not only the medium as a whole, but harmful towards the real, human artists in America. AI models train on artist's works with no sort of consent, acknowledgment, or permission from the artists who create these works. It takes years to develop the skills, talent, and knowledge to create the art that these companies then take inappropriately to create their AI models.

AI models that would not exist without real human art to steal from.

The end goal of Generative AI is to phase out real working artists with inferior work based off of their own stolen creations and then profit from it. This technology threatens the livelihood of every single artist in our country and only furthers the loss of creative talent, and high quality art being made in our society as models like these replace work, jobs, passionate people who work hard and want to share their art with the world.

In addition to eliminating jobs and opportunities for real American artists, generative AI as a technology is by design finite, flawed, and limited. This technology -cannot- create something new from nothing, it is completely reliant on the art it takes from.

Generative AI, as a concept and execution, is physically unable to create art that does not already exist in some form in it's database. I am not ignorant to this technology and have experienced firsthand the staggering limitations of it's ability and application, something that easing the restrictions and regulations of which -would not solve-.

I write in today to express with overwhelming urgency to say that as an artist, and on behalf of all my constituents that will be disenfranchised by the dysregulation of AI in America: Protect the copyrights of human artists, regulate this technology firmly and do not allow AI corporations to skirt permissions and consent from artists that allow their technology to function and exist in the first place.

Human artists make your favorite shows, art, and books because of the passionate and purposeful, and talented works they create from years of dedication and hard work that they deserve to be compensated for. By putting human artists first, you are protecting American people, American jobs, and the continued quality and passionate creation that supports our country's culture, and protect it from erasure caused by further elimination of the livelihood of artists in America.
