General Comment

I believe pursuing investment in generative AI is a serious mistake. It will only benefit generative AI companies in the short term, while individual Americans will have protections and rights stripped from them. Allowing generative AI companies to use private material to bolster their product, which they are trying to sell for a profit, is a conflict of interest as it means they have no limit on what sorts of data they can take and repurpose.

Allowing generative AI to flourish is also a security issue, as many individuals are already no doubt aware of deep fakes hurting the lives of individuals.

Americans employed in creative industries are losing jobs to companies pursuing generative AI without guardrails. Generative AI is being used uncritically for a wide variety of purposes. Its use in some instances is even leading to the spread of false information. Generative AI isn't even all that great at what it's being used for, as its results often need to be scrapped and discarded, or heavily edited by a human hand. It does not work as it's meant to and pursuing making it better would only take away valuable resources that could be allocated to tried and true methods.

Companies do not need an exemption to steal from American individuals and even other companies. We should not invest in generative AI and we should not allow the companies creating it to profit off of the hard work of others, with no recourse. To put it plainly, I do not think these companies should be allowed to steal the work of individual Americans for themselves. These companies should not be given an exemption for theft from our citizen's data at such a large scale.

The American government should not provide an exemption for companies to train on our data, private, public, or otherwise. Rather, I think we should be stricter with these companies. We should be holding them accountable for the actions they are taking that are disenfranchising many Americans as we speak.
